Abstract iii

List of Tables xi

List of Figures xv

Glossary xxi

1 Introduction 1
- 1.1 Goal of the thesis . . . 2
- 1.2 Outline of the thesis . . . 4

2 Neuroevolution 7
- 2.1 Evolutionary Algorithms . . . 7
  - 2.1.1 Canonical Genetic Algorithm . . . 10
  - 2.1.2 Steady State Genetic Algorithm . . . 14
  - 2.1.3 Eugenic Algorithm . . . 15
  - 2.1.4 Cooperative Co–evolution . . . 17
- 2.2 Artificial Neural Networks . . . 23
  - 2.2.1 Neural Architectures . . . 23
  - 2.2.2 Learning Algorithms . . . 24
- 2.3 Evolutionary Neural Networks . . . 25
  - 2.3.1 Levels of evolution in ANNs . . . 25
    - 2.3.1.1 Transfer functions . . . 26
    - 2.3.1.2 Connection weights . . . 26
    - 2.3.1.3 Topology . . . 27

2.3.1.4 Learning algorithm and parameters of the algorithm . . . 27
2.3.1.5 Simultaneous evolution . . . 28
2.3.2 Neuro–evolutionary methods . . . 28
2.3.2.1 Connectivity matrix . . . 29
2.3.2.2 Kitano rewriting encoding scheme . . . 30
2.3.2.3 Nolfi and Parisi model . . . 31
2.3.2.4 Cangelosi, Nolfi and Parisi model . . . 33
2.3.2.5 Cellular encoding . . . 34
2.3.2.6 Edge encoding . . . 37
2.3.2.7 Symbiotic adaptive neuroevolution . . . 37
2.3.2.8 NeuroEvolution of Augmenting Topologies 37

3 Assembler Encoding **40**
3.1 Fundamentals . . . 40
3.2 Network Definition Matrix . . . 44
3.3 Assembler Encoding Program . . . 45
3.4 Operations . . . 46
3.4.1 Four–parameter operations . . . 47
3.4.2 Three–parameter operations . . . 49
3.5 Modular ANNs . . . 51
3.5.1 Reusing information included in operations and data 52
3.5.2 Jumps . . . 54
3.5.3 Procedures . . . 55
3.6 Evolution in AE . . . 57
3.6.1 Scheme 1 . . . 57
3.6.2 Scheme 2 . . . 58
3.6.3 Scheme 3 . . . 60
3.6.4 Scheme 4 . . . 61
3.6.4.1 Method no. 1 . . . 63
3.6.4.2 Method no. 2 . . . 64
3.6.4.3 Method no. 3 . . . 65
3.6.4.4 Method no. 4 . . . 66
3.6.4.5 Method no. 5 . . . 66
3.6.5 Scheme 5 . . . 66
3.6.6 Scheme 6 . . . 68

3.6.7 Encoding programs, procedures, operations and data into chromosomes . . . 69
3.6.8 Evaluation process in AE . . . 71
3.7 Concluding remarks . . . 75

4 Configuration of Assembler Encoding **77**
4.1 Selecting a scheme for evolving AEPs . . . 78
4.1.1 Objective functions . . . 78
4.1.2 Experimental setup . . . 80
4.1.3 Experimental results . . . 83
4.1.4 Concluding remarks . . . 88
4.2 Selecting operations for AE . . . 88
4.2.1 Experiments on the optimization problem . . . 89
4.2.1.1 Experimental setup . . . 89
4.2.1.2 Experimental results . . . 90
4.2.2 Experiments with ANNs . . . 91
4.2.2.1 Environment . . . 93
4.2.2.2 Residents of the artificial world . . . 94
4.2.2.3 Neural controllers . . . 96
4.2.2.4 Experimental setup . . . 97
4.2.2.5 Evaluation process . . . 98
4.2.2.6 Experimental results . . . 99
4.2.3 Concluding remarks . . . 100
4.3 Selecting Genetic Algorithms for AE . . . 103
4.3.1 Experiments . . . 103
4.3.1.1 Environment . . . 104
4.3.1.2 Residents of the artificial world . . . 104
4.3.1.3 Neural controllers . . . 105
4.3.1.4 Evaluation of ANNs . . . 105
4.3.1.5 Experimental results . . . 107
4.3.2 Concluding remarks . . . 108
4.4 Organization of the evolutionary process in AE . . . 108
4.4.1 Experiments . . . 109
4.4.2 Concluding remarks . . . 112
4.5 Size of neural networks in AE . . . 113
4.5.1 Experiments . . . 113

4.5.2 Concluding remarks . . . 118
4.6 Evaluation of operations and data . . . 118
4.6.1 Experiments . . . 118
4.6.2 Concluding remarks . . . 120
4.7 The final form of AE . . . 120

5 Comparing Assembler Encoding with other methods 122
5.1 Experiments on the pole–balancing problem . . . 122
5.1.1 Inverted pendulum problem . . . 123
5.1.2 The first phase of the experiments . . . 125
5.1.2.1 Q–learning . . . 126
5.1.2.2 AHC . . . 128
5.1.2.3 GENITOR . . . 128
5.1.2.4 SANE . . . 129
5.1.2.5 CM . . . 129
5.1.2.6 CECM . . . 129
5.1.2.7 Version of AE compared to the methods above . . . 130
5.1.2.8 Experimental results . . . 131
5.1.3 The second phase of the experiments . . . 135
5.1.3.1 Q–learning with MLP . . . 135
5.1.3.2 SANE . . . 136
5.1.3.3 CNE . . . 136
5.1.3.4 NEAT . . . 137
5.1.3.5 ESP . . . 138
5.1.3.6 CoSyNE . . . 138
5.1.3.7 CECM . . . 139
5.1.3.8 AE . . . 139
5.1.3.9 Experimental results . . . 140
5.2 Experiments with Autonomous Underwater Vehicles . . . 143
5.2.1 Predator–prey problem . . . 144
5.2.2 Decision Systems . . . 146
5.2.3 Vehicles . . . 147
5.2.4 Evaluation of DSs . . . 149
5.2.5 Experimental results for the environment without a sea current . . . 152

5.2.6 Experimental results for the environment with a sea current . . . 157
5.3 Concluding remarks . . . 161

6 Modular neural networks in Assembler Encoding 163
6.1 Modules . . . 164
6.2 Analysis of ANNs produced in the previous experiments . . 165
6.3 Large–scale modularity in ANNs produced with AE 168
6.3.1 Variants of inverted pendulum problem 169
6.3.2 Operations used in the experiments 170
6.3.3 Experimental results 171
6.3.3.1 Two cart–and–pole systems 172
6.3.3.2 Three cart–and–pole systems 175
6.4 Concluding remarks . . . 178

7 Conclusion 180
7.1 Contribution . . . 180
7.2 Summary . . . 181
7.3 Possible improvements to AE . . . 185
7.3.1 Improvement 1 . . . 185
7.3.2 Improvement 2 . . . 186
7.3.3 Improvement 3 . . . 187
7.3.4 Improvement 4 . . . 188
7.3.5 Improvement 5 . . . 188
7.3.6 Improvement 6 . . . 189
7.3.7 Improvement 7 . . . 189
7.4 Directions of future research . . . 190
7.4.1 Experiments on a real RLP . . . 190
7.4.2 A combination of AE and RL . . . 191
7.4.3 Life–long learning . . . 196
7.4.4 New operations . . . 197
7.4.5 A new method for evaluating individuals . . . 198
7.4.6 A new scheme of evolution . . . 199

Bibliography 200

A Implementation of selected operations used in the experiments with AE 212

B ANNs with Hebbian self–organization and their representation in AE 220

C Fuzzy Expert System 223

D Properties of Assembler Encoding 228

D.1 Definitions 228
D.2 Property 1 (Completeness) 229
D.3 Property 2 (Closure) 229
D.4 Property 3 (Compactness) 231
D.5 Property 4 (Scalability) 232
D.6 Property 5 (Genotypic Multiplicity) 233
D.7 Property 6 (Phenotypic Multiplicity) 233
D.8 Property 7 (Ontogenetic Plasticity) 234
D.9 Property 8 (Modularity) 234
D.10 Property 9 (Genotypic Redundancy) 235
D.11 Property 10 (Decoding Redundancy) 235
D.12 Property 11 (Phenotypic Redundancy) 235
