Part II **11**

7 GRAPHIC VESSEL PATH RECKONING **11**

7.1 The essence and methods of dead reckoning 11

7.2 Leeway and methods to consider it in dead reckoning 14

7.2.1 Vessel courses relative to wind direction 14

7.2.2 Course to steer 15

7.2.3 Leeway angle 16

7.2.4 Methods to consider leeway in graphic reckoning . . . 16

7.2.5 Methods to determine leeway angle 19

7.3 Ocean current and methods to consider it in graphic reckoning 24

7.3.1 Ocean currents 24

7.3.2 Vessel course and speed in areas with ocean currents . 24

7.3.3 Methods to consider current in graphic reckoning . . . 27

7.3.4 Considering tidal current in dead reckoning carried out on an English map 36

7.3.5 Determining current elements using the navigational method 38

7.4 Simultaneous leeway and current computing – total drift . . . 39

7.4.1 Passive total drift computing in dead reckoning 40

7.4.2 Counteracting total drift in graphic reckoning 41

7.4.3 Practical determination of total drift 43

7.5 Graphic reckoning accuracy 44

7.6 Examples of calculations 47

7.7 Self-check questions 59

8 MATHEMATICAL RECKONING **61**

8.1 Simple mathematical reckoning 61

8.1.1 Mathematical reckoning according to average latitude – using a navigational triangle 62
8.1.2 Mathematical reckoning according to the increased latitude principle – the Mercator triangle 67
8.1.3 Precise calculation of distance on the rhumb line . . . 73
8.2 Complex mathematical reckoning 74
8.2.1 Considering ocean current elements in complex mathematical reckoning 76
8.3 Ship position coordinate reckoning on an ellipsoid 78
8.4 Examples of calculations 81
8.5 Self-check questions 85

9 PRINCIPLES OF DETERMINING THE VESSEL'S FIX AND ASSESSMENT OF ITS ACCURACY 87
9.1 General description of the vessel's fix 87
9.2 Specification of methods to determine the fix 89
9.3 General description of position lines 90
9.3.1 Position line from the measurement of a horizontal angle 91
9.3.2 Position line from distance measurement 92
9.3.3 Position line from bearing measurement for the navigational aid 92
9.3.4 Position line from a ship bearing 94
9.3.5 Position line from a distance difference measurement . 96
9.4 Position line accuracy 96
9.4.1 Navigational parameter gradients 97
9.4.2 Mean position line error values 98
9.5 Principle to assess ship position accuracy 99
9.5.1 Position error rectangle 99
9.5.2 Position error parallelogram 101
9.5.3 Mean position error ellipsis 101
9.5.4 Mean ship position error 103
9.6 Self-check questions 104

10 TERRESTRIAL METHODS OF POSITION FIXING 105
10.1 Description of methods 105
10.1.1 Methods to record vessel position elements 106

10.2 Determining position based on bearings for two navigational aids . . . 107
10.2.1 Method justification . . . 107
10.2.2 Execution and analysis of measurements . . . 107
10.2.3 Determining the fix . . . 111
10.2.4 Fix accuracy . . . 111
10.3 Determining position based on three navigational aid bearings 112
10.3.1 Method justification . . . 112
10.3.2 Execution and analysis of measurements . . . 113
10.3.3 Determining the fix . . . 116
10.3.4 Fix accuracy . . . 117
10.4 Determining position based on ambiguous bearings for one or two navigational aids . . . 117
10.4.1 Method justification . . . 117
10.4.2 Execution and analysis of measurements . . . 119
10.4.3 Determining the fix . . . 126
10.4.4 Fix accuracy . . . 128
10.5 Determining position based on distance measurement . . . 128
10.5.1 Distance measurement methods . . . 128
10.5.2 Position from two distances . . . 132
10.5.3 Position from three distances . . . 134
10.5.4 Determining the fix . . . 135
10.5.5 Fix accuracy . . . 135
10.6 Determining position based on non-simultaneous measured distances for one or two aids . . . 136
10.7 Determining position based on two horizontal angles . . . 136
10.7.1 Horizontal angle measurement method justification . . . 136
10.7.2 Execution and analysis of measurements . . . 140
10.7.3 Determining the fix . . . 143
10.7.4 Fix accuracy . . . 145
10.8 Determining position based on combined methods . . . 146
10.8.1 Ship position from a bearing and a leading line . . . 146
10.8.2 Position from a bearing and depth (depth contour) . . . 148
10.8.3 Position with the use of a celestial position line . . . 150
10.9 Navigational aids and their identification . . . 152
10.9.1 Navigational aid identification during the day . . . 153

10.9.2 Navigational aid identification at night 154
10.9.3 Geometric identification of navigational aids 156
10.10 Self-check questions 159

11 NAVIGATION ON DIFFERENT WATERS 161
11.1 General requirements for navigating on different waters 161
11.2 Navigating on deep sea 162
11.2.1 Description of deep sea 162
11.2.2 Route selection 164
11.3 Navigation on the great-circle line 165
11.3.1 Calculating the benefit from traveling the great-circle line 166
11.3.2 Elements of a great-circle line 167
11.3.3 Equator method of calculating great-circle line elements 169
11.3.4 Peak method of calculating great-circle line elements . 173
11.3.5 Rhumb line correction 175
11.3.6 Drawing the great-distance line on the Mercator projection 178
11.3.7 Great-circle approximation with the use of rhumb line sections 184
11.3.8 Various navigation 186
11.3.9 Application of nautical almanac (i.e. Sight Reduction Tables for Marine Navigation) in calculating the great-circle line 189
11.3.10 Considering the ellipsoid shape of the globe in calculating element of the great-circle line 193
11.4 Navigating on coastal waters 197
11.4.1 General description of coastal waters 197
11.4.2 General description of navigation on selected routes . . 198
11.4.3 Establishing a system of traffic separation schemes . . 204
11.4.4 Ships' Routeing 211
11.4.5 Approaching the shore or a direction mark 211
11.5 Navigating on difficult waters 214
11.5.1 Description of navigation on difficult waters 214
11.5.2 Considering circulation in navigating on the leading line and the water track 216

11.5.3 Using limiting position lines 218
11.5.4 Navigating through difficult areas 222
11.6 Examples of calculations 223
11.7 Self-check questions 224

12 NAVIGATING IN DIFFERENT HYDROLOGICAL AND METEOROLOGICAL CONDITIONS 227
12.1 Navigating with restricted visibility 227
12.1.1 Specific features of navigation with restricted visibility 227
12.1.2 Navigation in restricted visibility conditions 228
12.2 Navigating in the storm 229
12.3 Navigating in icing conditions 231
12.4 Self-check questions 237

13 TIDES AND NAVIGATION ON TIDAL WATERS 239
13.1 Tide rising forces 239
13.2 An outline of the static and dynamic theory of tides 243
13.3 An outline of the harmonic analysis of tides 246
13.4 Tidal irregularities 248
13.5 The impact of depth and shoreline configuration on tide parameters 253
13.6 Tide types and their parameters 254
13.7 Definitions related to tide types 257
13.8 Tidal currents 258
13.8.1 Tidal currents in the inshore area 258
13.8.2 Relation between the range of flood and the speed of the tidal current 260
13.9 General description of navigational aids referring to tides . . . 261
13.10 Navigation issues involving tides 262
13.11 Self-check questions 267

SYMBOLS AND ABBREVIATIONS 269

BIBLIOGRAPHY 273
