Basic abbreviation list	7
Basic symbols	9
Introduction	11
1 Navigational measurement errors	15
1.1 Systematic errors	17
1.2 Accidental errors	18
1.3 Gross errors	21
1.4 Position accuracy values in navigational measurements	21
2 Calculating accidental navigational parameter measurement errors	23
2.1 Calculating the mean value of equally accurate measurements	23
2.2 Mean error for a single measurement	25
2.3 Mean error of mean value	28
2.4 Normal distribution	30
2.4.1 Laplace transform	33
2.4.2 Computing the probability of error in specific limits	35
2.5 Correlation and its parameters	36
2.6 Mean navigational parameter errors	38
2.6.1 Summing up mean errors	38
2.6.2 Mean function error	39
2.6.3 Values of mean navigational parameter errors	45
3 Mean errors for indirectly calculated values	57
3.1 Mean position line errors	58

3.2	Navigational function gradients	62
3.2.1	Bearing	63
3.2.2	Distance	69
3.2.3	Horizontal angle	70
3.2.4	Distance difference	72
3.2.5	Sum of distances	73
3.2.6	Celestial object height	73
3.3	Examples of calculations of mean position line errors	76
3.3.1	Mean position line error calculated on the basis of optical bearing	76
3.3.2	Mean position line error calculated on the basis of distance	77
3.3.3	Mean position line error calculated on the basis of a horizontal angle	77
3.3.4	Mean position line error calculated on the basis of distance difference measurement	78
3.3.5	Mean position line error calculated on the basis of distance sum measurement	78
3.3.6	Mean position line error calculated on the basis of external radio bearing	79
3.3.7	Mean position line error calculated on the basis of own radio bearing	79
3.4	Position accuracy measures	81
3.4.1	Parallelogram of position error	82
3.4.2	Ellipse of position error	83
3.4.3	Mean position error in a preset direction	86
3.4.4	Covariance matrix	87
3.4.5	Accuracy zone	89
3.5	Calculating the elements of the ellipse of mean position error	89
3.6	Mean position error (M)	93
3.7	Probability of the ship being located within the limits of the mean error area (M)	95
3.8	Relation between mean position error (M) and mean position error in a preset direction (σ)	99
3.9	Calculating navigation system accuracy zones	101

3.9.1	Navigation system effect zones	101
3.9.2	Accuracy zone of a hyperbolic navigation system . . .	106
3.9.3	Accuracy zone for a statiometric navigation system .	111
3.9.4	Accuracy zone of an azimuthal navigation system . .	114
3.9.5	Accuracy zone from resection	116
3.10	Geometric mean position error and probable circular error .	117
3.11	Mean position errors and position accuracy factors	118
3.12	Spherical errors and their probability	120
3.13	Navigational parameter error values and their probabilities .	122
3.14	Most probable position	123
3.15	Mean navigation error	124
3.16	Navigation accuracy	125
3.17	Calculating mean position errors	126
3.17.1	Mean reckoned position error	126
3.17.2	Mean observed position error for position determined on the basis of two homogeneous position lines	137
3.17.3	Mean position error for a position from two non-homogeneous position lines	145
3.17.4	Mean position error for a position determined from two non-simultaneous position lines	151
4	Considering systematic errors in navigational measurements	157
4.1	Periodical calibration of a medium-range radio-navigational system	158
4.2	Continuous calibration of the DGPS system	159
4.2.1	Structure of the DGPS station chain	163
5	Required accuracy in maritime navigation	167
5.1	Definitions of navigational features and navigation services .	171
5.2	Navigational requirements	178
5.3	Specification of tasks executed at sea	182
5.4	Required position and positioning service accuracies	191
5.5	Navigational requirements for Polish territorial waters . .	200
Bibliography		205

Appendices	207
Appendices	
A Value of function $\phi(X)$	209
B Calibration of radio-navigational systems	213
1 Radio-navigational system calibration technology for systems used in maritime hydrography	213
1.1 General principles of calibrating radio-navigational systems	213
1.2 Preparation	217
1.3 Development of the necessary geodetic grid	219
1.4 Development of the necessary geodetic grid	221
1.5 Reading the group and phase value of radio wave distribution	222
2 Execution of radio-navigational system calibration	226
2.1 System calibration with the use of charts	226
2.2 System calibration using a computer	229
3 Verification of the quality of calibration, documentation	230
3.1 General principles of calibration of radio-navigational systems	230
3.2 Calibration documentation	232
C Types of military activities requiring position determination with preset accuracy	235
